

SR DEVOPS ENGINEER- FRANKFURT

We are HERE

Ever checked in somewhere on social media? Ever tracked your online orders? You might be using HERE Technologies every single day without even realizing it. You can find us everywhere: in vehicles, smartphones, drones or third-party apps. We believe that with the right people, we will continue to be a game-changer in the technology industry and improve the daily lives of people around the world.

HERE enables people, enterprises and cities around the world to harness the power of location and create innovative solutions that make our lives safer and more efficient. We transform information from devices, vehicles, infrastructure and other sources into real-time location services that play a key role in how we move, live and interact with one another.

The Team and the role

The project team is world-wide, with the core in Frankfurt, Germany as well as workstream teams Mumbai, India and San Francisco, USA. Our team is unifying access to map data of any kind and provide simple yet powerful tools to visualize and interact with such data. As such, we are contributing to many projects inside of HERE and outside, like Map Creator and data visualizations on here.com and other sites.

You will work with the development teams and drive to automate and streamline the deployment & delivery (CI/CD) pipelines. This includes building and packaging backend services (mostly in Java but also NodeJS) and serverless applications (AWS Lambda) as well as JavaScript UI components and ReactJS frontend applications. You should bring good experience with Docker containers and AWS as a deployment infrastructure.

What you should bring along (qualifications)

Your experience, knowledge and passion for DevOps will help and inspire the teams to automate delivery, testing and continuous monitoring of daily work into production. Additionally, your passion for Open Source and work to streamline external contributions and pull requests into the codebases. This is a unique opportunity in HERE as the development will be public (on GitHub) and involve working with the Open Source community.

- Experience in Docker, Jenkins, Git
- AWS EC2, ECS, Lambda, RDS, CloudFormation
- Programming experience in Java/Javascript/Bash
- Good understanding of security and hardening concepts

What do we offer

- An opportunity to work with extraordinary developers
- Challenging problems to solve
- Work that makes a difference in the world
- Freedom to decide how to perform your work
- Variety in the types of projects
- Feedback so you will know how well you are doing
- Collaborative and supportive colleagues.

[Make HERE your destination, we are just getting started. Apply Now.](#)
